Chapter-I

Introduction

FIFA, the Federation Internationale de Football Association (FIFA), is perhaps the most prestigious sports organisation in the world, with 209 members, second only to the United Nations. Founded with objectives to bring national soccer associations together (**FIFA, n.d.**).

FIFA was founded on May 21, 1904, by seven national football associations (Belgium, Denmark, France, Netherlands, Spain, Sweden, and Switzerland) to "promote the game of association Football (as opposed to Rugby or American Football), to foster friendly relations among National Associations, Confederations, their officials, and their players, by promoting the organisation of Football matches at all levels, and by controlling all types of association football by taking whatever procedures are required or advisable (**FIFA, n.d.**)."

In the nineteenth century, British soldiers introduced football to the Calcutta (then the capital of India). The first club, Calcutta FC, was founded in 1872. According to reports, they started as a rugby club before deciding to transition to football in 1894. The Durand Cup was first held in Shimla in 1888. It is the first Indian football competition, as well as the world's third oldest surviving competition. Sir Mortimer Durand was the one who started it. Sovabazar Club won the Trades Cup in 1892. Sovabazar Club, which won the Trades Cup in 1892, was the first Indian team to accomplish glory. In 1893, the Indian Football Association (IFA) was formed in Calcutta (no Indian members till the 1920s). Nagendra Prasad Sarbadhakari was considered the father of Indian Football. (**History, n.d.**).

The RB Ferguson football club was founded on February 20, 1899, in Thrissur, Kerala, and was India's oldest football club. Young Men's Football Club was the club's moniker, and it was instrumental in establishing football in Kerala in the early 1900s. (**History, n.d.**).

In 1911, Mohun Bagan won the IFA shield. The club rose to prominence after becoming the first Indian team to win the IFA Shield, which had previously only been won by British clubs located in India. At the time, the team was dubbed "the immortal eleven."

The Indian squad, which included both Indian and British players and was led by great Indian footballer Gostha Pal, visited Sri Lanka in 1924 (**History, n.d.**).

In 1937, members of Football associations from six different regions met at the Army Headquarters in Simla to form the All India Football Federation (AIFF). The Indian Football Association (IFA), Army Sports Control Board (ASCB), United Provinces, Bihar, North West

India Football Association, and Delhi were among the six regions represented in the historic meeting (***History, n.d.***).

In 1938, India went on an official tour to Australia, where they played five friendly matches against the Australian national team as well as matches against other Australian clubs. R. Lumsden was the first player to score a hat-trick for India in an international football match. On September 24, 1938, he accomplished the feat in a friendly match against Australia. The Durand Cup has been dominated by British teams for nearly 50 years. In 1940, the glorious Mohammedan Sporting squad broke the hegemony by defeating the Royal Warwickshire Regiment 2-1. This historic victory proved to be a watershed moment in Indian football (***History, n.d.***).

India's first major international competition was the 1948 London Olympics, where a mainly barefooted Indian squad was defeated 1-2 by France before being dismissed in the first round. Consequently, everyone, including King George VI, was enthralled by the team's footballing prowess (***History, n.d.***).

Due to the withdrawal of all of their scheduled opponents, India qualified for the 1950 FIFA World Cup finals by default, but AIFF pulled out of the tournament as well, alleging "disagreements over team selection and insufficient practice time (***History, n.d.***)."

In Indian football, the years 1951 to 1962 are regarded as the golden years. India became Asia's top team under the guidance of Syed Abdul Rahim. The Indian squad began the 1950s with a win at the Asian Games, which they hosted in 1951. India advanced to the final by defeating both Indonesia and Afghanistan 3-0. India won against Iran 1-0 to become the winners of the Asian game in 1951. The winning streak continued in 1952 when they won the Colombo Quadrangular Cup in Sri Lanka. (**"History of Indian Football," 2022**).

History of Delhi Soccer

New Delhi is known for its cultural richness and the sheer number of cultures it houses. Youngmen FC was the first club to be founded in Delhi before independence, in 1898. They didn't have much of a rival until 1905, when Mughal FC was created, although just a few friendly matches were held, or perhaps British Regimental teams summoned local teams for games (***Delhi's Football Culture Revealed, n.d.***).

In the 1930s, the local league was founded. Many Football clubs have sprung up in the region throughout the years, including Mohammaden Sporting FC and Union FC. These clubs provided

some of the players for the 1944 Santosh Trophy winning team, which defeated Bengal 2-0 in the finals. This ultimate victory also has a fascinating backstory; no one knows how much of it is genuine, but it is what history books tell us (*Delhi's Football Culture Revealed, n.d.*).

There were no professional academies or licensed coaches at that time. Senior players were the only ones who stayed after practice to teach their juniors the finer points of the game (*Delhi's Football Culture Revealed, n.d.*).

The early post-independence period was difficult for Delhi because the country was undergoing partition, and all influxes had to be handled by the country's capital, Delhi. Many outstanding players, notably the Hassan brothers (Afzal and Ahmed Hassan), and midfielders from Mughals FC, who were key players in Delhi's 1944 Santosh Trophy victory, were lost as a result of the partition. Football, and sports in general, played an important part in bringing the communities together (*Delhi's Football Culture Revealed, n.d.*).

When the local league regained its popularity in the 1960s, football regained its old impetus. The teams used to practice in the Red Fort region because there were few restrictions. Although Delhi only won the Santosh Trophy once, in 1944, it had a fantastic run in its later years, winning against Hyderabad in 1952, which was quite an achievement since Hyderabad had many players from the National Team. The team was unaffected by the loss of players due to the partition; new players stepped forward to fill the void. Some teams did not recover as rapidly as others; the Mughals, for example, did not win the league until 1995 (*Delhi's Football Culture Revealed, n.d.*).

Football has been regaining popularity in Delhi in recent years. With the renaming of DSA to Football Delhi and the appointment of Dr. Shaji Prabhakaran as President, the future appears bright. The youth are getting a lot of exposure thanks to several events organised by commercial organisations and the government (*Delhi's Football Culture Revealed, n.d.*).

Delhi now has 20 teams in Senior Division, 43 teams in A & B Division, 5 teams Women's Division, and 20 Institutional Clubs (*About Fd | Football Delhi, n.d.*).

In a telephonic interview with turf Football, Dr. Shaji Prabhakaran, President of Football Delhi, suggested several possibilities. According to him, "We need numerous grassroots methods in Delhi, one of which is to deal with schools and other educational institutions, as this is the first step in any footballer's path. At the same time, we require another for all of the newly established

clubs and academies.” Dr. Prabhakar also believes that a community that values athletics and includes individuals of all ages is necessary (*Delhi’s Football Culture Revealed, n.d.*).

FC Noida is one such club that is working at the grassroots level in the Delhi NCR to build an all-inclusive Football community through projects such as 'GullyGullyMeinFootball', in which they inspire and train impoverished children to enjoy the beautiful game. Similarly, 'Keep It Up' has several initiatives in place to teach young people the importance of participating in sports (*Delhi’s Football Culture Revealed, n.d.*).

Sunil Chhetri, India's all-time leading goal scorer, expressed his affection for the place where he grew up. *"I am humbled by Football Delhi's kindness in honoring me with the Football Ratna award. My support for the growth of Football in Delhi will always be there, and I am confident that the current management is working hard to make Delhi a model football state in India,"* Chhetri stated (*Pranav Khatri Blogs, n.d.*).

Statement of the Problem

The purpose of the study will be to analyse the revamp of Delhi Soccer.

Objectives of the Study

1. To report the present status of the male and female footballers in Delhi Football.
2. To identify the influence of coaching and training on Delhi Football.
3. To understand the impact of administrative management on the revamping of Football Delhi.
4. To see the procedure of Talent Identification and Talent Development in Delhi.
5. To see the impact of Media and Sponsorship on the development of Football Delhi.
6. To understand the Financial Strategies for the development of Football Delhi.
7. To understand the procedure for scheduling the events at various levels in Football Delhi.

Delimitation of the study

The study delimitates to:

1. The study will be delimited to Organisational structure of Football Delhi.
2. The study will further delimited to Training Strategies- Talent Identification, Training, Coaching, and Event Schedule of Football Delhi.
3. The study will also delimited to Finance management- Sponsorship, and funding of Football Delhi.

4. The study will delimited to Promotional Strategies- Media, and marketing of Football Delhi.
5. The study will further delimited on administrative, coaches, players, and player's parents clubs of Football Delhi.

Limitation of the study

1. The level of honesty and internal motives of the sample while giving information during the interview and replying to the opinionative will be considered as limitations of the present project work, as factors could not perhaps be controlled to cent percent perfection.
2. The availability of sources of data will be a limitation of the study.

Important Definition and Term

Training

“The process by which an athlete prepares for the highest level of performance is called training. A coach's capacity to direct performance optimization is achieved through the creation of systematic plans that incorporate knowledge from a wide range of scientific areas.” **(Bompa & Haff, 2009).**

Organizational Structure

According to Minterzberg (1972), “Organizational structure is the framework of the relations between jobs, systems, operating processes, people, and groups making efforts to achieve the goals” **(Ahmady et al., 2016).**

“Organizational structure refers to the models of internal relations of organization, power and relations and reporting, formal communication channels, responsibility, and decision-making delegation is clarified” **(Ahmady et al., 2016).**

Sponsorship

“Professional sports sponsorship extends beyond economic agreements between clubs and leagues. Individual athletes have sponsorship agreements that give them extra revenue to support their team sports contracts or prize money (for individuals)” **(Hoye, 2015).**

Media

“Information, education, and entertainment are often considered to be the three broad functions of the media in society. In terms of the sport-media relationship, it has become increasingly evident that consumers and media organizations are increasingly concerned with the entertainment value of professional sports. There is a variety of print (e.g. newspapers and magazines) and broadcast (e.g. radio, television, and the internet) media outlets reporting on the exploits of leagues, teams, and athletes around the world” **(Hoye, 2015)**.

CHAPTER- II

Review Of Related Literature

The researcher has attempted to locate literature related to the study in this chapter. A summary of previous studies related to the topic of the study has been identified and used as a source of information for the better conduct of the study. The studies reviewed by the researcher are cited below:

Baloni (2015) this study was conducted entitled, “A Study of Factors Influencing the Development of Women Football in India”. Here the researcher analysis three aspects social, psychological, and management. The main objectives were to see the present status of social, psychological, and management aspects and factors in the development of women's football in India. Based on the finding of the study, As far as social factors are concerned, the three most important ones were: the coach's support and encouragement, teammates' support, and parents' support. Among the most encouraging and influential "psychological factors" were "enjoyment abstracted from the sport itself", "love of the sport" and "dedication" towards sport. A "fair selection process" and "availability of coaches" were the only factors that were significant in the development of women's football in India, namely "results and performance in national/state championships" that boosted their confidence. As a result of all interviews, the findings concluded that "parents and school/college teachers" provided moderate support" (**Baloni, 2015**).

Tozetto et al. (2019) The goal of this study was to find out what tactics a football club used to enhance coach development.

A Brazilian elite club sent eight coaches and four technical coordinators. The QSR Nvivo 9.2 software was used to evaluate the data from semi-structured interviews with coaches and technical coordinators.

Three support schemes were found, each with its own set of action pillars: a) Mentoring and meetings - assistance among coaches, conversations with coaching staff, and free theme meetings; b) Continuing education incentive; c) Club Pillars - club goals, continuity of coaches, and coach evaluation.

The data allows us to recognise this Club's significant contributions to continuous coach development. Furthermore, the Club may be described as an authentic learning organisation because of the promotion of a secure work environment that encourages coaches to participate in the Club's organisational culture and allows for proper communication and frequent updating through courses and meetings **(Tozetto et al., 2019)**.

Mansfield & Killick (2012) This article examines the formation of the UK Netball Superleague (UK NSL) in 2005 using franchising theories. The purpose of this paper is to look into the establishment of an empowered franchise framework as part of England Netball's elite performance strategy, as well as the Superleague's implications for player performance, team success, and franchise commercial potential. The conversation is based on 22 in-depth interviews with franchise and sports media/marketing personnel between 2008 and 2011. The UK NSL is described in the paper as an empowered franchise model characterised by a shift from the business format franchise's centralised hierarchical model to one that is decentralised and informal, with high degrees of diversity in terms of organisational environment and structural characteristics of specialisation and standardisation **(Mansfield & Killick, 2012)**.

Fynn et al. (2021) In this study the researchers used a collective case study design that included 35 semi-structured interviews and document analysis of different sources of data from 23 GHGA-funded physical activity programmes. Thematic and framework analyses were used by the researchers. Researchers created a logic model and compared actual results to expected results. A narrative summary is included. Researcher address the consequences for effective public health intervention commissioning and assessment.

The researcher identified five main themes of influences on evaluation practices that can act as barriers and facilitators to good practice: programme and project design; evaluation design; partnerships; resources; and organisational structures and systems. These influences are context-specific and operate through a complex set of interactions **(Fynn et al., 2021)**.

Maurya (2009) the purpose of this case study is to look at how the Board for Control of Cricket in India has promoted the shortest form of cricket, twenty20 cricket, in India. The BCCI established the Indian Premier League to develop professional Twenty20 cricket in India. This

case study looks at the IPL's franchising model to see how businesses can profit from marketing sports like cricket in India (**Maurya, 2009**).

CHAPTER-III

Methodology

The procedure and methodology of the current study is described in this chapter. It relates to the study's design, strategy, and specific techniques for achieving the study's objectives in a justified manner. The procedure used in this study is detailed, including the consideration of the **opinionnaire**, the condensing of interview questions, data sources, tools, Questionnaire administration, and statistical technique.

Selection of the subjects

The desired information will be gathered for the current study by convenient Purposive sampling from **200 players** representing various clubs in Football Delhi (Governing body of Football Delhi) in India via a self-developed Questionnaire and **fifty (50) administrative**, coaches, players, and player's parents via semi-structured interviews.

Consideration of the Questionnaire

Considering a study of the literature on the case study, I (scholar) discovered that the following factors are important in the development of Football Delhi in the country. As a result, for the existing investigation problem, the following aspects will be considered:

- Organisational structure of Football Delhi.
- Training Strategies- Talent Identification, Training, Coaching, and Event Schedule of Football Delhi.
- Finance management- Sponsorship, and funding of Football Delhi.
- Promotional Strategies- Media, and marketing of Football Delhi.

Criterion measures

Self-developed Questionnaire for Football players and semi-structured interviews for administrative, coaches, players, and player's parents will be administered for the study. Questionnaire will be developed under the guidance and approval of the supervisor, co-supervisor, expert of football, and other proficient personalities in physical education.

Questions for the semi-structured interview will be constructed in consultation with the supervisor, co-supervisor, and experts in the field of physical education through focus group discussion. In the semi-structured interviews, the researcher has only a general idea of the topics to be covered and the respondent tends to lead the direction of the interview. Further, the

question will be developed by the researcher as the interview progressed. This allowed the respondent to provide information from his or her perspective, and to develop areas that are important to them.

Tools

The self-developed Questionnaire will be established to find out the factors that influence the revamping of the Football Delhi. This Questionnaire will measure the perception of subjects related to training and coaching, organizational structure, talent identification, sponsorship, finance and Fund, and events Schedule factors that influence the revamping of the Delhi Football Association.

Semi-structured interviews with administrative, coaches, players, and player's parents will be considered as the basis for abstracting relevant information i.e., causes and effects.

Steps for Construction of the opinionnaire

The Questionnaire will be prepared in consultation with the supervisor, co-supervisor, and other experts in the field of Football and physical education. Guidelines for developing the Questionnaire will obtain from the selected books, the internet, and the available literature in the library of LNIPE, GWALIOR; attempts are also made to make the questions simple, clear, and relevant, leaving no room for ambiguity.

Development of the Questionnaire is start with writing as many as statements and every care is taken that no ambiguities exist and the terminologies are précised. The opinionnaire will be developed in the following manner:

Initial Writing

The first step in the direction of developing the Questionnaire will be to frame as many statements as possible with the help of the supervisor, and co-supervisor. Also, While developing a statement I will be going through the literature that exists concerning footballers and the sub-variables that affect them. As a result, the research scholar took all care to frame the statements based on the literature and research studies.

Every care will be taken to present the statements simply and sequentially. The discussion concluded with 150 questions that are considered relevant to the objectives of the study. Further, all efforts will be made to avoid the ambiguity in the statements and is drafted. Apart from these, the following things were taken into the care while drafting the Questionnaire:

1. Investigators will be avoided the specialized terminologies.

2. Questions biased will be avoided.
3. Lengthy statements will be avoided in the Questionnaire, similarly complicated and very complex statements are also avoided.
4. Questions too difficult and time-consuming will be avoided.

First Trial Run

After developing the statements, completing initial writing then prepared Questionnaire will be used for the trial run on the randomly selected 10 subjects to know that the meaning of all statements in the Questionnaire is clear and adequate to obtain the desired information. The investigator will also ask for ambiguities, incomplete or misunderstood statements if any, and what they feel from the statements in the Questionnaire.

Rewriting

Based on the first trial run the received from the subjects are incorporated. All the ambiguous statements will be modified, the statements which will be misunderstood are replaced with the appropriate words, and rewriting is finalized.

Second Trial Run

After incorporating the suggestions from randomly selected subjects, the second trial run will conduct on the next group of randomly selected 10 subjects and they are also asked for their suggestions if any.

Final Writing

All the suggestions that I (scholar) and my supervisor feel are relevant are included. Based on the final suggestions received, the final number of questions will be selected for the study. The statements will be typed with a single space having the personal data of the subjects to know from where the Questionnaire has emerged with clear instructions to fill it.

Validation of the Questionnaire

The Questionnaire will be sent to the 10 experts from the field of physical education. All the experts are asked to give their opinions regarding retaining the statements which may yield the desired information from the subjects.

The scholar retained the statements which are approved by 80% and above of experts.

Administration of the Questionnaire

Before the Questionnaire is administered, I will explain the purpose of the study of my subjects. The scholar will be requested the subjects to provide authentic information and in the case, if there is any ambiguity the research scholar gives immediate assistance to the subjects for clarification of doubts. The subjects are assured that the information provided by them will be kept confidential.

Administration of the Interview

For the study, the interview (semi-Structured) method will be used for the taking the recorded observation and written. In these semi-structured interviews, the researcher has only a general idea of the topics to be covered and the respondent tends to lead the direction of the interview. Further, the question will be developed by the researcher as the interview progressed. This allowed the respondent to provide information from his or her perspective, and develop areas that are important to them.

Collection of the Data

In the first stage, the Questionnaire will be administered through convenient purposive sampling on two hundred (200) football players representing Delhi Football. The data from the Questionnaire will be obtained based on the frequencies. The total number of respondents is computed. In the second stage, the desired information/data will be collected through semi-structured interviews with fifty (50) administrative, coaches, players, and player's parents of Football Delhi. The statements will be given to them about varied questions in the area of revamping Delhi Football in India. A qualitative analysis of each question will be done.

Statistical Technique

After collecting the data it will be analyzed in the following way:

- A. Non-parametric Calculation
 - a. Chi-Square
- B. Descriptive statistics
 - a. Percentage
 - b. Frequency
- C. Statistical Significance will be tested at a 0.05 level.
